

Enhancing Patient and Provider Experience

PHIX is a non-profit founded by El Paso health leaders, to safely and securely enable providers to see the full picture of a patient's health history from medication, diagnoses, to healthcare goals. Our electronic network is designed to link all hospitals, physicians, and health service providers in real-time so essential information on your medical care can be available to providers 24/7.

Improve Patient Experience

PHIX replaces calling and faxing for records, to review lab results, radiology reports, discharge summaries, and other clinical information which supports quality care.

Save Time

Eliminates the need for patients to gather paper copies by having the right information at the time of their visit, available to providers electronically.

Saves Lives

Providers have made life saving referrals by using PHIX to review records from hospitals and emergency departments at the point of care.
